CLOCKS FROM VULTRON

Clearsign clocks incorporate the very latest transfective LCD technology achieving remarkable clarity in all lighting conditions.

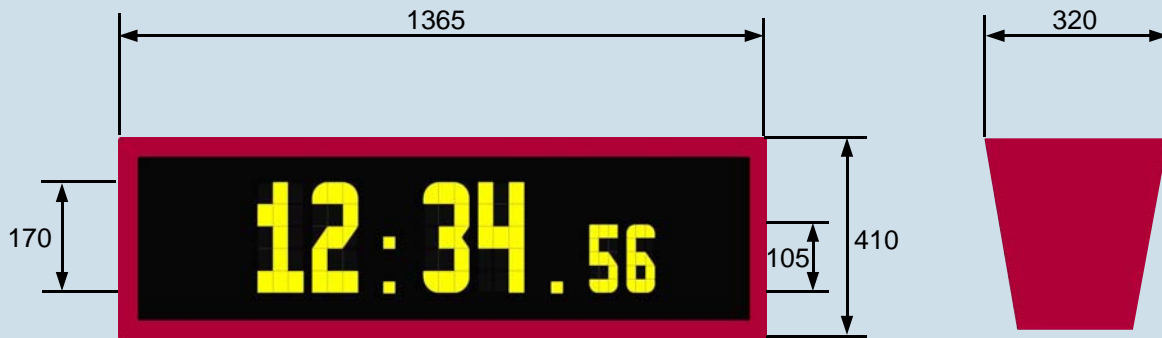

Displaying bright, bold yellow characters against a uniform background ensures the clocks are easy to see and clear to read.

Vultron clocks offer improved character shapes, and reduced chance of misreading the time, due to their 38 segments per character compared with 7 segments for the older, traditional digital clocks.

The system is reliable and accurate making it easy to operate and inexpensive to maintain.

## Example of Clock Layout
